

### Question 1:

Read the number of correct, wrong, and unanswered questions. Calculate a score using +4 for correct, -1 for wrong, and 0 for unanswered.

### Flow Chart:

## Output

Console

Enter number of correct answers:

5

Enter number of wrong answers:

3

Enter number of unanswered questions:

2

Final Score =17

## Pseudo Code

```
0  Function Main
1      Declare Integer correct
2      Declare Integer wrong
3      Declare Integer unanswered
4      Declare Integer score
5
6      Output "Enter number of correct answers: "
7      Input correct
8      Output "Enter number of wrong answers:"
9      Input wrong
10     Output "Enter number of unanswered questions:"
11     Input unanswered
12     Assign score = (correct * 4) - (wrong * 1) + (unanswered * 0)
13     Output "Final Score ="
14     Output score
15 End
```

## Java Code

```
0  import java.util.*;
1  import java.lang.Math;
2
3  public class Program {
4      private static Scanner input = new Scanner(System.in);
5
6      public static void main(String[] args) {
7          int correct;
8          int wrong;
9          int unanswered;
10         int score;
11
12         System.out.println("Enter number of correct answers: ");
13         correct = input.nextInt();
14         System.out.println("Enter number of wrong answers:");
15         wrong = input.nextInt();
16         System.out.println("Enter number of unanswered questions:");
17         unanswered = input.nextInt();
18         score = correct * 4 - wrong * 1 + unanswered * 0;
19         System.out.print("Final Score =");
20         System.out.println(score);
21     }
22 }
```

## Question 2:

Read a positive integer and find the sum of all prime numbers up to that integer.

## Flow Chart:

## Output

## Pseudo Code

## Java Code

```
0  import java.util.*;
1  import java.lang.Math;
2
3  public class Program {
4      private static Scanner input = new Scanner(System.in);
5
6      public static void main(String[] args) {
7          int n;
8          int i;
9          int j;
10         int sum;
11         int count;
12
13         n = input.nextInt();
14         sum = 0;
15         for (i = 2; i <= n; i++) {
16             count = 0;
17             for (j = 1; j <= i; j++) {
18                 if (i % j == 0) {
19                     count = count + 1;
20                 }
21             }
22             if (count == 2) {
23                 sum = sum + i;
24             }
25         }
26         System.out.print("The sum is: ");
27         System.out.println(sum);
28     }
29 }
```

### Question 3:

Create functions for deposit and withdrawal that return the updated balance.  
Process a sequence of transactions selected through a menu.

### Flow Chart:

#### Main

## Function Deposit

## Function Withdraw

# Output

|                              |      |
|------------------------------|------|
| Input Balance                |      |
| 1. Deposit                   | 1000 |
| 2. Withdraw                  |      |
| 3. Balance                   |      |
| 4. Exit                      |      |
| Enter amount to deposit      | 1    |
| 1. Deposit                   | 500  |
| 2. Withdraw                  |      |
| 3. Balance                   |      |
| 4. Exit                      |      |
| Your current balance is 1500 | 3    |
| 1. Deposit                   |      |
| 2. Withdraw                  |      |
| 3. Balance                   |      |
| 4. Exit                      |      |
| Enter amount to withdraw     | 2    |
| 1. Deposit                   |      |
| 2. Withdraw                  | 300  |
| 3. Balance                   |      |
| 4. Exit                      |      |
| Your current balance is 1200 | 3    |
| 1. Deposit                   |      |
| 2. Withdraw                  |      |
| 3. Balance                   |      |
| 4. Exit                      | 4    |
